## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by *Arunachalam et al* the US Patent No: (US 6,631,122), hereinafter referred to as *Arunachalam*.

**Regarding claim 1;** *Arunachalam* teaches a method of providing a packet call service via an Internet Protocol (IP) based network in a wireless mobile communication system, comprising the steps of:

constructing a set of service primitive information including radio channel assignment information in accordance with at least one service class for the packet call service (*see Fig. 6, col. 8, lines 13-46*);

determining a service primitive combination according to a service class of a packet call based on the constructed service primitive information, if a packet call for at least one mobile terminal is generated (*see col. 8, lines 47-53*);

assigning to the at least one mobile terminal a radio channel corresponding to the determined service primitive combination (*see col. 6, lines 1-12*); and

providing the at least one mobile terminal with the packet call service by using the assigned radio channel (*see col. 5, lines 50-54*).

**Regarding claim 2;** *Arunachalam* teaches the method of claim 1, wherein the service primitive combination is determined on the basis of service class information of the packet call received from the IP network (*see col. 8, lines 54-67*).

**Regarding claim 3;** *Arunachalam* teaches the method of claim 2, wherein the service class information of the packet call is input by a user of the at least one mobile terminal (*see col. 6, lines 1-12, and col. 11, lines 8-30*).

**Regarding claim 4;** *Arunachalam* teaches the method of claim 1, wherein the service primitive information includes radio channel assignment information for an interactive call (*see col. 5, lines 35-53*).

### ***Allowable Subject Matter***

3. **Claims 5-10** are objected to as being dependent upon a rejected base claim, but would be allowable if rewrite in independent form including all of the limitation of the base claim and any intervening claims.

4. **Claims 11-18** are allowable.
